What do the frequency file name suffixes represent?

- "CY" programs have Cymatic frequencies added to a Van Gelder set.
- "EST" programs are established Van Gelder frequency sets.
- "G" programs are frequency sets that were created by Dr. John Garvey.
- "NP" programs are nasal probe frequency sets designed to run on the EM272's nasal probes.
- "VG" programs designate these are Van Gelder frequencies ran in A/B pairs as taught by Carolyn McMakin.
- "PA" programs are phased array programs, which are frequencies that are run in phase with each other. One frequency runs on three magnets while a second frequency runs on another three magnets. When a frequency is run on three magnets in close proximity of each other, the intensity increases five to ten times. These programs are used for deeper penetration.
